Old Light Bulb

Written by David on October, 5 2013

During the recent electrical upgrade a very old light bulb was discovered. This bulb was hiding in the attic above the auditorium!

The filament dates the bulb to the early 1920's. It has remnants of red paint on the bulb.

The bulb was made to run on 110 volts, the standard voltage of the day. It still works, but is very bright on the 120 volts it has today.

Strand volunteer Bob Schlick built a dimmer unit for the bulb, and it is now displayed in our front window.
